Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.A virus is a small infectious agent that replicates within living cells of organisms. Viruses infect all types of organisms, from animals and plants to bacteria and archaea. Today, around 5,000 viruses have been reported in detail, although there are potentially millions. Viruses are found in almost every ecosystem on Earth and are the most abundant type of biological entity. The study of viruses is known as virology, a sub-speciality of microbiology. Virology has two volumes. Volume 1 mainly discusses the latest research related to Human Immunodeficiency Virus (HIV). Volume 2 (this volume) discusses other important issues and trends within the research community. Chapter 1 highlights seminal findings from the basic sciences and describes the benefits and risks of current medications based on the recent advances in genetics, immunology, diagnostic imaging, medicinal chemistry, clinical therapeutics and health-care systems. Chapter 2 presents a brief description of foot-and-mouth disease virus (FMDV) and the different functions of various viral proteins. Chapter 3 proposes a model, in which humoral immunity against monomer capsid protein (CP) is immunopathogenic; whereas antibodies generated in response to the intact virion results in protective immunity. Chapter 4 discusses current understandings of human innate immune responses to respiratory viral infections in the airways, viral evasion strategies, and abnormalities in the immune responses in people with chronic airways diseases, leading to increased susceptibility and worsened outcome. Chapter 5 presents three replication modes: normal, rolling circle, and double rolling circle replication (DRCR). Chapter 6 considers the evidence for transmission of the flavivirus West Nile Virus (WNV) by ticks in addition to the major transmission vector, mosquitoes. Chapter 7 describes two tick-borne viruses that may be circulating in the Iberian...
