Longer and heavier trains must be handled at higher speeds and the use of electricity appears to be the logical solution of the problem. The reliability of operation of the electric locomotive, and its flexibility of control, have been proved and the advantages that may be expected from electric operation are well known. Electric locomotives are operating successfully over a length of continuous line 440 lines long and during 24 consecutive hours a single locomotive has been able to attain a mileage of 766 miles, while the monthly mileage has reached the high figure of more than 12,000 miles.
